

# ABSTRACT OF THE DISCLOSURE

A small-sized mobile radio in which its built-in antenna is high enough to enhance the antenna characteristics.

5 In the mobile radio, a base plate 35 is structured by a section (antenna-housing section) including a supply portion and a short-circuiting portion, for example, of an antenna element 36a which affect the antenna characteristics, and a section (circuit-housing section) which is the rest of the base plate.

10 The antenna-housing section is so positioned as to keep the built-in antenna 36 high enough, that is, to keep the space between the base plate 35 and the antenna element 36a large enough. On the other hand, the circuit-housing section is positioned toward the back of the cabinet to provide a room for a display 32 and  
15 a key section 33.
